

Shaver Solves Fume Problem for Major Metal Manufacturer

Nu-Tech Precision Metals required a custom curtain system that would redirect hazardous smoke and fumes out of the factory while not impeding large cranes from getting around the plant.

To solve this problem, Shaver provided turnkey installation of 132' of straight track curtain along with an 80' wide sliding curtain with a custom magnetic device so that cranes could move the curtain whenever necessary.

The system significantly reduced the spread of noxious fumes and smoke providing Nu-Tech employees with a safer and cleaner work environment.
