

Shaver Enclosure Solves Dust Problem at Painting Facility

As a complete manufacturer and supplier of decorative trim systems, Kromet needed a way to ensure that ash and other debris from the manufacturing process did not make its way into the paint station.

The paint station already had 12' hard walls in place, but they did not reach all the way to the ceiling. Kromet also required that the enclosure provide employees with easy access in and out.

Shaver installed Klearspan curtains on the existing walls extending them to the ceiling to prevent airborne debris from entering the booth. A sliding curtain was also added to allow for easy access to the booth and further protection from ash and debris.

Kromet's cleaner work environment has also helped increase productivity as painting can be completed sooner, with less downtime required for cleaning.
