

Safety Partitions for Tire Plant

Shaver Industries regularly develops customized protective solutions for the safety of employees during the manufacturing process in a variety of plants.

A tire plant customer came to Shaver Industries with a request for an enclosure that would ensure optimum protection for tire press operators and support staff. An additional requirement was easy access for maintenance personnel in a tight production area. It was necessary for the enclosure to be folded and moved out of the way, which is not possible with traditional rigid steel and wire mesh enclosures.

Working closely with the customer, Shaver Industries was able to design a framed partition with a strong and flexible plastic curtain that met all of the client's requirements.

Shaver Industries turnkey solutions give customers a 20% cost saving compared with a traditional steel enclosure. This lightweight custom solution is easy to relocate and provides a higher level of safety and versatility.

INNOVATIVE SOLUTIONS...PRECISION...RELIABILITY
