## Noisy Compressors No Match for Shaver's Sound Absorber Panels

A large manufacturing facility has noisy compressors affecting the overall plant noise.

This facility featured two compressors side by side, sending noise to the entire plant. Our customer wanted to enclose both to reduce sound but still needed to have access for maintenance.

Shaver solved the problem by installing a couple of steel frame/ABA 25 panels and a sliding track for access to the compressors.

The sound absorber panels reduced the noise levels in the overall plant considerably and our customer was very satisfied.
