

SHAVER

INDUSTRIES INC.

Innovative Solutions Environmental Protection Systems

Protecting your employees from fumes, noise, machinery and drafts while improving the use of space in your facility can be a challenge. Shaver Industries can help you control your working environment at a fraction of the cost of building permanent walls. In addition to substantial cost savings, you have the added flexibility of partitions and curtains that can be moved and adapted by your staff to suit changing project requirements. We evaluate your specific application and work with you to create partitions of any size, shape or height. Our custom designed enclosures come in flexible panels or PVC strips. Manual or fully automated, our versatile curtain systems can be stationary or movable. Options include roll-up, cantilever or bi-parting.

Fabric Curtains, Partitions and Enclosures

Attention to Custom Detailing and Professional Problem Solving

In addition to their safety features, Shaver curtains, partitions and enclosures are versatile, economical and highly effective. They can be suspended from existing ceilings, providing greater cost savings when compared to the construction of permanent structures. If your needs change, it is easy to remove or restructure our products in comparison to fixed blocks or metal partitions which cost 30-40% of initial investment to take down.

Shaver will analyze your specific needs and recommend a curtain, partition or enclosure system that is ideal for the use, conditions, and space requirements of your particular workspace or area. Available as stationary, sliding track, power or manual roll-up curtains.

Heavy duty cantilever swing doors.

Custom designed curtains for shipping and receiving areas.

Stationary curtain providing fume containment.

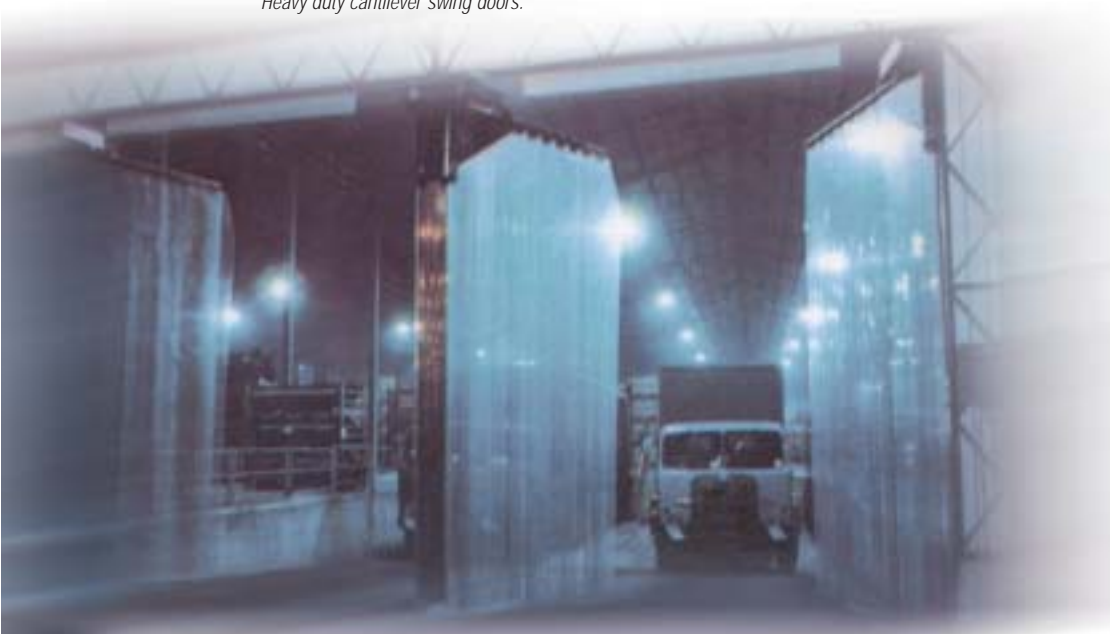

Custom engineered roll-up curtain in a welding environment permitting overhead crane access.

Versatile sliding track system.

**Maximize your space
by managing...**

- Fumes
- Drafts
- Sound Containment
- Machine Mists
- Temperature/Climate Control
- Robotic Enclosures
- Welding Areas
- Production Lines
- Wash Down Areas

PVC Strip Curtains for fume containment.

Visual protection in welding area.

Low temperature grade PVC for cooler and/or freezer applications.

Flexible and robust PVC strips allow easy access while conserving energy.

PVC Strip Curtains and Doors

Competitive Price and Fast Delivery

Improve your safety, reduce noise and lower your energy costs by using our proven selection of PVC strip curtains and doors. They provide an excellent thermal barrier, while increasing worker comfort and productivity. In addition, they are considered to be an efficient low cost alternative to expensive sound reducing materials. In many situations, the reduced energy costs can help to amortize your investment in one season.

Our products are available in standard or custom configurations. Choose from USDA approved low temperature strips for food handling applications in freezers, flame retardant weld screen material to protect against the effects of ultra violet light, or a bright orange safety strip to outline door jamba and hazardous areas.

Other colors such as yellow, red, blue, green or gray are available on request. PVC strips come in standard widths ranging from 6" to 66" and thicknesses of 0.040" to 0.500".

Based on our many years of experience we have developed unique hardware and mounting methods to address difficult applications thus reducing installation cost. Our PVC strips are easy to install with our unique galvanized pre-studded mounting hardware.

Temperature control in shipping area.

Safe, transparent strips eliminate the risk of being hit by heavy solid swing doors as a result of incoming traffic.

Do-it-yourself rolled goods are in stock and available in different material compositions to meet your specific requirements.

Our customers appreciate our flexibility and product knowledge, which give them energy savings and better productivity.

Pedestrian access to climate controlled area.

Aluminum guarding for automation or machining centers with or without viewing windows.

Bug screens are made of flexible mesh allowing fresh air to flow into your facility.

Power Roll-Up Curtains

Low Wind Load Indoor Applications

Shaver Industries manufactures an economical power roll-up curtain, which is an ideal alternative to more costly high-speed roll-up doors, shields and guards.

We have designed and developed a product that is easy to install, reliable, flexible and safe to operate. Power roll-up curtains come in a wide variety of materials to suit the most extreme environments and easily mount to most applications. Rigid horizontal bars maintain stability under moderate air pressure conditions. They are available for low, medium and high frequency applications.

Typical applications include welding/robotic cells, environmental containment, food handling, interior pedestrian and throughways, climate sensitive areas, paint booth dividers, machinery separation and/or guarding, conveyor passageways, privacy barriers and proprietary areas.

Our qualified technicians work with you to develop the most economic solution for your specific application.

Bug Screens

Shaver Industries designs and manufactures a wide range of flexible screens to keep insects, birds and rodents off your premises. In addition, they stop trespassers and provide a more comfortable work environment. Shaver bug screens are custom designed and available in various configurations such as spring loaded roll up, automatic roll up, chain hoist, and sliding track. They are made of durable materials, are easy to install and require low maintenance.

Integrated fully protected low profile motor ideal for wash-down areas or operations that require an absolutely clean environment.

Large roll-up curtains improve plant safety and move out of the way for easy, impact-free access.

Roll-up curtains are available in a wide range of colors.

Optional stainless steel components and custom fabrics are available to meet the stringent requirements of food handling industry. Additional features such as a soft bottom safety edge can be added.

Noise reduction in automotive plant.

Sound absorption in grinding area.

Noise abatement materials are durable and are easily installed by ceiling or floor mounted hardware.

Noise enclosure for compressors.

Noise Abatement Solutions

Acoustical Consulting

If you have a noise problem, we can help you solve it. Take advantage of our low cost acoustical consulting services which include site inspection and assessment of ambient sound pressure levels. Our experts will recommend the most cost-effective noise abatement solution.

Noise Enclosures for Optimum Protection

Shaver Industries offers a wide selection of sound barriers, sound absorbers and composites designed to decouple noise at its source.

These various types of sound abatement materials can be engineered into acoustical curtains and screens, quilted sound absorbers, ceiling baffles as well as noise enclosures.

Our products provide superior transmission loss with reduced noise levels even on the 'noise' side of the curtain. Quilted composites are designed to contain and absorb reflected and broadcast noise within enclosed areas and along transmission paths.

Robot Covers

Robot covers provide protection for your automated machine investment by keeping contaminants out of sensitive equipment. Individual custom covers for other equipment are available in virtually any design.

Electronic Covers

Shaver Industries designs and manufactures customized covers for wash-down areas and environments that are exposed to dust and dirt.

At Shaver Industries, we pride ourselves in providing complete turnkey solutions, on time, every time. Our many years of experience and our flexibility allow us to meet and exceed your expectations.

We offer a complete line of machine protection systems.
