

SHAVER

INDUSTRIES INC.

Superior Detailing and Design

Steel Way Covers

Designed to protect machine ways from heavy chip loads, way covers are available for any machine tool application. Our way covers come in a wide variety of profiles, to suit any type of way surface, no matter how unusual its size or profile. Depending on the application, way covers can be made from steel or stainless steel, and in various sheet thicknesses. They are available in horizontal, vertical, cross rail and dual axis motion versions.

Way Wipers

We manufacture a diverse line of way wipers to suit the needs of any application. Even after extensive exposure to hot chips, our way wipers have proven themselves to be more reliable, durable and easier to maintain than other products on the market.

Spin Windows

Improve your productivity by using our electrically or hydraulically driven spin windows. They allow you to view the machining process without being impaired by coolants or chips. Spin windows are suitable for all CNC milling machines, lathes and machining centres, both in original equipment and subsequent installation.

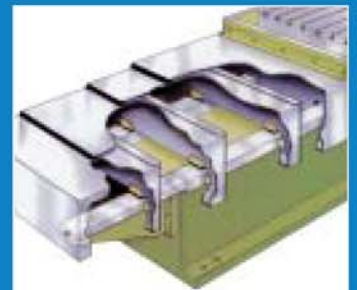

We are capable of designing and manufacturing oversize steel way covers.

Peak style covers provide additional strength and allow the fluids to drain off to the side.

Our way covers can be adapted to your individual requirements.

Smooth, quiet and uniform tracking of telescoping steel boxes.

SHAVER
INDUSTRIES INC.
www.shaverinc.com

Our fully equipped Mobile Service Unit can repair and refurbish most makes of way covers.

Protect your investment from damaging chips and fines.

Our CDF systems are equipped with long life, permanent filtration media.

Improve your Productivity

Steel Way Cover Repair and Refurbishment

Reduce your downtime and take advantage of our fully equipped **Mobile Service Unit**. We can repair and refurbish most makes of way covers. Our technical consultants work with you to optimize your maintenance and repair requirements resulting in reduced downtime and lower costs.

Chip Conveyors

Efficient, dependable chip collection is a key ingredient in maximizing the performance of today's machining centres.

Chip conveyors improve machine efficiencies.

Depending on the layout, quantity and type of chip being conveyed, chip conveyor solutions are available in belt, scraper and magnetic styles.

Chip Disk Filtration Systems (CDF)

Our CDF is based on a rotating-disk, second-stage filtration system that filters out chips and fines down to 40 microns. It efficiently recovers the fluids which results in less frequent cleaning and maintenance. The CDF unit's low profile makes it suitable for small as well as large machine tools.

We are here to help our customers with initial design ideas and material selection, and to produce suitable and economic solutions to improve the efficiency of their equipment.

We offer a complete line of machine and environmental protection systems.

Custom Fabric Bellows

Lift Table Bellows

Roll-up Cover and Aprons

Fabric Curtains

PVC Strip Curtains

Power Roll-Up Curtains
